(54) Title: FIREFIGHTING SYSTEM

(57) Abstract: A fire fighting system includes a rack having open sides for carrying sprinklers on the outsides and hoses within. The rack has a generally enclosed pair of rigid ends, a lower rigid floor and an upper rigid brace, wherein the pair of rigid ends are mounted in spaced apart relation on opposite ends of the floor and the brace. Releasable mounting means are mounted on the pair of rigid ends for releasably mounting a plurality of elongate sprinklers across spaced apart sides of the open sides of the rack so as to form, when the sprinklers are mounted thereon, rigid side walls covering the spaced apart sides of the open sides. This defines an enclosed storage cavity within the rack bounded by the ends, the side walls, the floor and the brace. The storage cavity is sized for storage of the coiled hoses therein.
